Spotlight on Vacuum Pumps, Robotics, and Chemicals

Vaccon Company

www.vaccon.com

Vaccon Company engineers and manufactures an extensive line of air-powered venturi vacuum pumps, material conveying products, air amplifiers, and high flow/high vacuum pumps for the robotics, automation and process control industries. Vaccon designs and builds complete customized wrist-down End-of-Arm-Tooling to fit any robot and handle any payload. Whether you are picking up glass, metal, foam or food, Vaccon has the pump to solve all your material handling operations.

Soft Robotics

E-mail: cvause@softroboticsinc.com

www.softroboticsinc.com

Soft Robotics designs and builds grippers and control systems that can manipulate items of varying size, shape and weight with a single device. By leveraging the science of soft robotic actuators, it is now possible to automate facilities that have traditionally depended on manual labor for bin picking, order fulfillment, and other complex pick and place tasks. Let us help you solve your gripper problem and together we can expand the world of automation.

Energid Technologies Transene

www.energid.com

Energid Technologies develops advanced software and robotic systems for the aerospace, agriculture, manufacturing, transportation, defense, and medical industries. Energid's Actin® software is a powerful control framework and operating system for commercial, industrial, and mission critical robots that is sold as a cross platform application and extensible software toolkit. Energid specializes in the control, simulation, and sensing of complex robotic systems

www.transene.com

Founded in 1965, Transene remains at the forefront in developing and manufacturing materials for the electronics industry. Fields of interest include wet chemical etchants for metals and dielectrics, photoresists and photoresist ancillary chemicals, electroless and electrolytic plating solutions, conductive and insulative epoxies, silicones, photomask chemicals, encapsulants, and high purity cleaning chemicals.
